

Data Warehouse Services

Business Intelligence & Data Warehouse

SERVICES

- Database Management Services
- Business Intelligence & Data Warehousing
- IT Architecture Services
- IT Training Services
- Application Development & Maintenance Services
- IT Project Management
- IT Product Engineering
- Business Process Management

The foundation of any Business Intelligence (BI) implementation is the Data Warehouse (DW), whether it supports the entire enterprise or is just a departmental solution. Our flexible approach to BI implementations and proven methodology provide scalability and natural evolution of the BI solution with the ever-changing business demands. It also gives the organization a competitive advantage by helping them to analyze factors relevant to their business such as changing trends in market share, changes in customer behavior and spending patterns, customers' preferences, company capabilities and market conditions.

InfiOp provide the following BI and Data Warehouse related services:

- DW & BI readiness assessment
- BI Strategy & Management Services
- Data Integration & Data Warehousing Services
- Performance Management & Analytics Services

DW & BI readiness assessment determines where the organization is currently on the Information Intelligence Lifecycle and outlines the appropriate steps needed to make BI work. This examines five critical areas - business needs, organization, information architecture, technical architecture, and project planning & methodology. The "Readiness Assessment" essentially encompasses the Investigative phase, the Gap Analysis phase, the Solutions analysis phase and finally the Recommendation phase with deliverables.

BI Strategy and Management Services bridge the gap between business objectives and technical solutions to deliver better access to the information needed. Through detailed planning, tool selection assistance, and competency center development, InfiOp helps organizations evolve the BI program in a way that delivers a sustained competitive advantage.

Most Organizations need to integrate disparate data as a result of mergers and acquisitions or due to applications from various different vendors within organization. InfiOp through their Data Integration Services help organizations develop an underlying infrastructure that provides well-integrated, high-quality data to applications, processes, and people.

Data Warehouse Services

Data Integration & Data Warehousing Services include:

- Requirements Gathering & Analysis
- Dimensional / Star Schema Data Modeling
- Data Warehouse Technical Infrastructure Design
- ETL Requirements Gathering & Analysis
- Data Profiling
- ETL Development & Enhancements
